

PICK THE RIGHT SIZE

Measure first: measure across the handle where the clamp will hold it and pick the closest size. It should sit snug, and the latch should close without forcing.

GREAT FOR

- ✓ Garage and shed tools
- ✓ Pantry and closet brooms and mops
- ✓ Service vans, trucks and trailers
- ✓ PVC pipe, conduit, dowels and rods
- ✓ R/C car ramps and hobby gear

DO NOT USE IT FOR

- ✗ **People or pets.** No climbing, lifting or fall protection.
- ✗ **Vehicle exteriors.** In a vehicle, use it only in the truck bed or cargo area. Never on roof racks or bumpers.
- ✗ **Heavy loads.** Do not exceed 50 lb per clamp.
- ✗ **Items that don't fit.** Forcing the latch can crack it. Too small can slip out.
- ✗ **Heat.** Keep away from engines, exhaust, heaters and other high-heat sources.
- ✗ **Drywall alone.** Screw the rail into a stud or a 1x4 board at minimum.
- ✗ **Play.** Not a toy. Small parts: keep away from young children.

CARE

Check it. Look over latches and screws now and then, more often in a vehicle.

Replace it. Cracked, or the latch won't close securely? Stop using it.

Clean it. Wipe with mild soap and water.

Cargo Clamp LLC · Patented

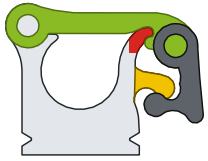

HOW IT WORKS

Cargo, meet Clamp!

Quick-start guide: mount it, load it, latch it.

MEET THE PARTS

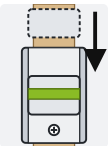

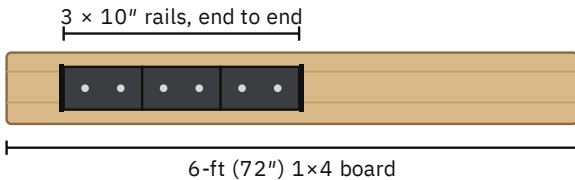

- **Body** and cradle
- **Latch** on its hinge
- **Lip** the latch hooks
- **Lock lever**
- **Catch** for the lever

Colors mark the parts. Clamps come in black or white. The lock lever and catch are on the double latch only.

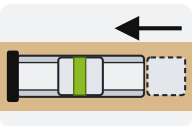

MOUNT THE 10" RAIL

HORIZONTAL ONLY

Screw the 10" rail to a stud, or to a **1×4 board at minimum**, for stability. The board also lets you line up more rails to extend the spine.

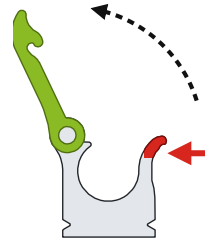

4" rail: vertical only. Screw it upright into a wall stud, then slide a clamp in from the top.

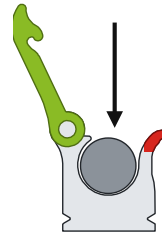

Add the clamps. Slide each one into the open end of the rail, then fit the end caps on both ends so they can't slide out.

SINGLE LATCH

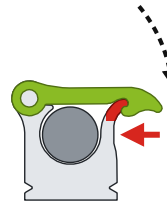

Everyday grab-and-go: garage, shed, pantry and closet walls.

1. Open. Push back on the red lip while you lift the latch up and off it.

2. Load. Set the item you're securing into the round cradle.

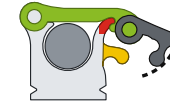

3. Secure. Press down on the latch while pushing back on the lip of the cradle until the item is held securely.

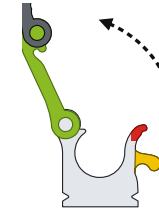

To release: push back on the red lip and lift the latch. Never pry it open with a tool.

DOUBLE LATCH

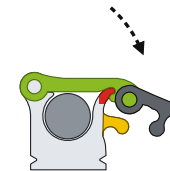

Required for items in transit, like inside a van or truck bed.

1. Unlock. Flip the lock lever out and off the yellow catch.

2. Open. Push back on the red lip while you lift the latch up and back.

3. Load and secure. Set the item you're securing into the round cradle. Press down on the latch while pushing back on the lip until it's secure.

4. Lock. Swing the lock lever down until its hook grabs the yellow catch.

To release: flip the lever out first, then push back on the lip and lift the latch.
